I bring to you another new version of the theme factory, a simple model themes for XOOPS, the package includes three variations of the theme, and thus a greater range of possible layouts.

The package also includes within the plugins folder:

- Nivo Slider for integration
- Skitter Slider for integration
- Menu dropdown for integration
- Lavalamp menu integration
- Megadropdown for integration

Integrate is very simple, just include the .html desired functionality in theme.html and call the .css and and .js respectively.
