NEWS_PDF_DATE: 2014/4/6 7:50:00

We are getting closer to have a PHP 5.5.x - certified XOOPS version.

Today we are very happy to release for testing **XOOPS 2.5.7 RC-1**

This release is focused on PHP 5.5.x compatibility, security enhancements, and bug fixes. We have also updated jQuery and several jQuery components.

Angelo Rocha also has updated this new cool theme: the **xBootstrap theme**, based on Bootstrap 😃

See the Changelog below for more details.

Minimum PHP Version: 5.3.7

Please note: the fact that the XOOPS Core runs correctly on PHP 5.5.x, doesn't mean that all your modules will run correctly, therefore you'll need to test them first.

The recently released modules that qualify for our **Basic Module Pack**, are all tested on PHP 5.5.x, and they should run just fine.

For all others, please let us know about any issues you might have.

Download: SourceForge File Repository.

Please remember: This is a RC version and mainly for features testing!!!!

Please DO NOT install it on a production site and DO NOT upgrade any production site with it!!! But we encourage everybody to test it heavily! 😃

Please post and discuss all issues related to this release in this forum thread
