In the next few weeks the XOOPS Website will be very busy, with a lot of work happening in the front of you! 😊

Instead of making a secret out of it, and then creating a huge splash out of it, we've decided to just go ahead and make changes to the Website as we go.

What is happening:

- 1) We are moving to PHP 7. Originally we were on 5.4, and this weekend we moved to PHP 5.6, as as soon as our host offers PHP 7, we'll be ready.
- 2) We've also moved the Website to the latest XOOPS Core, so we can test it here before we officially release it.
- 3) We are also updating all modules that are being used here, which will help us, of course with your help, to discover any bugs 😊

We have updated the NewBB Forums to the latest version, as well as News. We'll be converting soon the News to Publisher, as strategically that's what we want to invest our time in.

And we'll be adding some new cool modules, like the one upcoming wgTimelines developed by Goffy from Germany. We'll transition our "XOOPS Innovators" and "XOOPSer of the Month" awards there. The work on the converting the "XOOPS Innovators" to the wgTimelines has already started - you can check it out here <http://xoops.org/modules/wgtimelines/>

What else?

We have moved modules developed by Wishcraft to one location on GitHub (read [more here](#)), so you can check them out, fork, and contribute back.

We have also created one GitHub location for various XOOPS D3 modules. If you're curious what the D3 modules are, please read [more here](#)

Of course, we hope that you'll help us on this journey as we're moving closer to the next release of XOOPS 🙏

And in case you were wondering, yes, we're looking for a new responsive theme for this updated Website! So if you would like to design a new theme for us, please let us know...
