I've written a hack for wfsection to enable ordinary users to use WYSIWYG editor instead of basic HTML editor. Originally only wfsection admin can use WYSIWYG editor. Also ordinary users can see and edit their pages inside an article list page.

There are some known bugs in this hack:

Documents that uploaded with wfsection, cannot be removed or edited with this hack as ordinary user. But can be edited or deleted with admin as usual. This bug need to be fixed. I'm waiting help to fix this bug.

You can download this hack with this [link](#)
