ErrorDocs For Xoops - Modules

NEWS_PDF_AUTHOR: AAINC

NEWS_PDF_DATE: 2003/10/31 8:38:47

I have converted a small PHP Nuke addon to work with Xoops.
ErrorDocs for Xoops allows the 404, 401, 400 and 403 errors to look like your site, not the plain ones the server shows.

See a demo here http://archangelartifacts.com/filenotfound

I would like to add a small function to call Xoops DB to make it more personalized for members that are logged in.
If you get to this before me please post in my forums, also post if you have any problems.

I have the download available in .zip and .rar formats at:
Http://www.ArchangelArtifacts.com

No Reg Required For Dowloads
PEACE
