

Spaw WYSIWYG Editor for Xoops - Modules

NEWS\_PDF\_AUTHOR: Anonymous

NEWS\_PDF\_DATE: 2004/1/4 15:14:37

**\*\* Correction \*\***

**I would like to point out that I have incorrectly released this module as from the module development team. This module should not have not been, is NOT a Xoops certified module and will never be.**

**I will stress that I released this module due to popular demand and due to the way it is written could never be part of XMDT as such.**

**My Apologies to all for misleading the Xoops public with this release.**

**I will however update this module as a private project.**

We have heavily modified this script and converted this into a module that can easily be used with any module that uses TextArea Forms.

This module is very easy to use and has been set up in such a way that you only need to add a few lines to any module and it will be up and running in no time.

This module is considered Beta and used at your own risk. We would be pleased if you could give us some feedback on this one.

This module will only work on IE v5+.

We are currently working on an editor that will work with other browsers.

Download from [here!](#)

I would like to dedicate this module to someone who is very special to me and close to my heart. Thanks babes. 😊
