AMEMBER SCRIPT FOR XOOPS v2

As part of my job as Director of Product Development for the Core Team - my job is to encourage outside developers to port their excellent php scripts to Xoops based modules.

I am proud to announce that Xoops can now add the very popular aMember script to our already powerful CMS! This brings us one step closer to being a true commerce class piece of software!

Here's a description: **aMember is a flexible membership and subscription management PHP script. It has support for PayPal, BeanStream, 2Checkout, NoChex, VeriSign PayFlow, Authorize.Net, PaySystems, Probilling, Multicards, E-Gold and Clickbank payment systems (complete list can be found here) and allows you to setup paid-membership areas on your site.** You can view the features

here: <http://www.cgi-central.net/scripts/amember/features.php#cm01> This is a for-pay script. Alex Scott has set a price of \$40, which IMHO opinion is a pretty fair deal! Words directly from Alex after he developed this module: "Thank you for your attention and your product - I really like clear codes of your project. phpNuke should go directly to Recycle bin after that!" Have fun! Dan (dlh) P.S. I do not have any stake in this effort and have not reviewed his code. Please refer and comments regarding the module to Alex Scott at his website: <http://www.cgi-central.net/> EDIT - Just received a clarification e-mail from Alex (slightly paraphrased): "There are 2 facts in this story that can be understood incorrectly by readers: 1) The module works with aMember Pro only, so total cost is not 40, but 139+40 2) This module is not a block or addition for XOOPS. It is plugin FOR AMEMBER, but it will manage XOOPS users database and it makes possible to sell membership, track expirations, protect plain HTML and downloadable files, having "single-login" with XOOPS and aMember."
