

## Theme Changer 2.0 - Modules

NEWS\_PDF\_AUTHOR: tmstms

NEWS\_PDF\_DATE: 2004/5/10 12:33:18

Theme Changer 2.0 was released. This enables you to switch your themes for each module. By using a special theme file, a module and mysql, it switches themes.

### + Features +

- You can set a theme just for the top page of your site.
- You can configure themes and so on for each module.

What you can configure is as follows:

- Themes
- Site titles
- Site subtitles
- META(keywords)
- META(Description)

### + Using Sample +

- Layout particular pages, like WIKI or TinyContent, easier to see by using a theme altered places of blocks.
- Make unique mood module by module...
- Change your site's title and META tags for search engines.
- ...etc

The possibility of this module depends on your usage. 😊

### + Download +

<http://tms.s10.xrea.com:8080/mydownloads-visit-cid-1-lid-5.html>

### + Demo +

<http://tms.s10.xrea.com:8080/>

### + Install +

- 1st:Upload "theme\_changer" into the modules directory in your server.
- 2nd:Install it.
- 3rd:Upload the enclosed theme "z\_changeable\_theme" into the themes directory.
- 4th:Change "Default theme" of preferences in system admin to "z\_changeable\_theme".
