

Free IRC - Module - Modules

NEWS_PDF_AUTHOR: w4z004

NEWS_PDF_DATE: 2002/2/20 19:31:55

based on the free irc java applet from bocazas (well it's really great).

Module: a free IRC Xoops-Module !

Author: S_O_D from <http://www.diabloworld.com>

Downloadlocation: [HERE](#) and in the downloadsection

this module have

- a main menu entry.
- a admin menu entry

in the admin menu entry you could change all possible parameters from the applet
the parameters are:

- the title from the chatsite
- the ircserver where this applet should connect
- the irc port (mostly 6667)
- the channel where the applet should join
- the language from the applet
- selection if it should show the channellist after log on or not
- the option to allow dcc filetransfer with the applet or not
- the option to select if the applet should join the channel automatically or not

if the user is logged in the module tries to connect with this username to the irc server, if this username is in use it will ask for a new name.

if the user is not logged in the module will try to log on as guest if this name is in use it'll ask for a new one.

so hope this will help some ppl here
