

Hack a module for XOOPS Multilanguage (How-to) - Hacks

NEWS\_PDF\_AUTHOR: marcan

NEWS\_PDF\_DATE: 2004/6/14 17:40:00

Have you installed the [XOOPS Multilanguage hack](#) but are using a module that has not yet been hacked to support it? No problem!

You can now do it yourself with this tutorial : [How to hack a module to use XOOPS Multilanguages](#)

Some of you were requesting this one for quite a while now! Well, I finally had some time to write it.

Please note that to hack a module, you need some PHP knowledge, as well as some basic understanding of how XOOPS works.

I hope this will help some of you.

Finally, if you hack a module to support XOOPS Multilanguage, it would be really nice if you could send me the modified files so I can include them in a future release of the package. Thanks!

Should you have any questions, please feel free to post them on [NotreVie.ca](#)
