

## FatalQuery Server Query module RC1 Released - Modules

NEWS\_PDF\_AUTHOR: intel352

NEWS\_PDF\_DATE: 2004/6/22 22:10:15

I uploaded this release last week, and finally got around to posting the news today. 😊

The FatalQuery Halflife Server Query module Release Candidate 1 has been released. This module originally existed in PHP-Nuke, and was created by nobleclm at <http://fatalexception.us>. This is a port of his module, and while everything works fine, there are still a few php notices that need to be fixed, as well as templates that need to be created.

This module allows you to have a block+module that lists the server information for any Half-Life based mod, such as Counter-strike. You can view a working example here: <http://cvsdev.csmcentral.com/html/modules/fatalquery/index.php>.

There is also an active example of the HLStats port that I have in progress at the same site.

Download the FatalQuery release candidate here:

[http://dev.xoops.org/modules/xfmod/project/showfiles.php?group\\_id=1062&release\\_id=77#selected](http://dev.xoops.org/modules/xfmod/project/showfiles.php?group_id=1062&release_id=77#selected)

Please report all bugs at the same location 😊
