After quite a while, my project <http://www.sicheres-funknetz.de/> is back online. Founded in 2002 and originally based on PHPNuke, the site deteriorated heavily after I left my former employer. Now, after a hard struggle, I managed to take the domain over and relaunched the project, based on XOOPS.

<http://www.sicheres-funknetz.de/> is a dedicated German community portal on wireless lan security. As there wasn't any central German-speaking ressource about this topic, this project was founded.
