

Xoops Chess Module - Modules

I recently published my chess module in the [downloads section](#). The module allows users to play chess games against each other.

I've set up a [public demo](#). If you don't want to register, here are a couple of testing accounts:

Username: demo1

Password: demo1

Username: demo2

Password: demo2

I'd appreciate some feedback on how well it works, whether it has bugs, etc. Feedback by PM or email is ok, but it's probably better if each issue is posted as a separate thread in the appropriate [XOOPS Modules Support forum](#). 🗨️
