I recently published my chess module in the [downloads section](#). The module allows users to play chess games against each other.

-----

I've set up a [public demo](#). If you don't want to register, here are a couple of testing accounts:

Username: demo1

Password: demo1

Username: demo2

Password: demo2

-----

I'd appreciate some feedback on how well it works, whether it has bugs, etc. Feedback by PM or email is ok, but it's probably better if each issue is posted as a separate thread in the appropriate [XOOPS Modules Support forum](#). 🙏
