Articles Version 0.17 is mainly a bug fix release for v0.16a. The changes are:

- o E-mail to friend function would fail if your site is running on a version of PHP older than 4.3.0 - the result was a blank page. I have added a custom function for sites using older versions of PHP.
- o Category and article titles in both front and back ends may have been displayed with garbled text. I only found this on one of my sites, but I have made some changes to try and prevent anyone else from experiencing this problem.
- o Actually got around to writing some installation instructions...

This version can be downloaded from [the download site](#)
