As for each version of XOOPS since 2.0.6, the release of XOOPS 2.0.7.1 is immediatly followed by the release of a new version of XOOPS Multilanguages !

I hereby give you XOOPS Multilanguages 1.4.1 ! You can download it via this link :

[Zip Version \[478 Ko\]](#)

As I have been really busy lately with SmartFAQ, I did not have time to improve this package. So, what's in version 1.4.1 ? Some minor bug fixes and, of course, the modified files for the hack to run with the XOOPS 2.0.7.1.

A new package

However, I did do a little something for you my friends 😊 ! Inside the package, there is now a third folder called *XOOPS_2.0.7.1_ML_1.4.1*. This folder contains the modified files from XOOPS 2.0.7 to XOOPS 2.0.7.1, as well as the new version of XOOPS Multilanguages.

What does it mean ?

Typically, users of XOOPS Multilanguages had to do these steps in order to upgrade their site to a new version of XOOPS :

- Apply the upgrade patch *xoops-2.0.x_to_2.0.y.zip* to their site;
- Apply the new version of XOOPS Multilanguages.

Well, I now have combined these 2 steps in a single one. If you are running XOOPS 2.0.7 with XOOPS Multilanguages 1.4, you can upgrade to XOOPS 2.0.7.1 and XOOPS Multilanguages 1.4.1 by doing this :

- Simply copy the content of the folder *XOOPS_2.0.7.1_ML_1.4.1* to the root of your XOOPS site, and update the System module (as required by the upgrade to XOOPS 2.0.7.1).

Please don't forget this !

Now, don't forget that the upgrade package in *XOOPS_2.0.7.1_ML_1.4.1* is not a XOOPS Official Package. As mentionned in the ReadMe.txt file, it remains a **heavily modified** version of XOOPS 2.0.7.1.

Also, as I always say it : PLEASE CAREFULLY read the ReadMe.txt file as it has a lot of information you should be aware of.

Finally, you can find some interesting tutorials and informations about XOOPS Multilanguages on my site NotreVie.ca.
