

Long Awaited Roster Page - Modules

NEWS_PDF_AUTHOR: Arowana

NEWS_PDF_DATE: 2004/9/16 15:19:06

It is finished, yes the long looked for roster page for your XOOPS site is here. I hired a programmer 4 days ago and he has built the Roster Module with Application page, and all the admin features to customize it just for your XOOPS site.

The Application page you might have to manually edit to your need and the Roster Module was based on the OFX_Clan_Roster module for nuke php. Rather than try to port over the OFX_Clan_Roster module for nuke php we decided just to build a new module just for XOOPS site.

This module is great for all sites that need a roster page for members of their clan, band, org, team, business, etc etc. As for myself I have it on a gaming site and so far it is working swwet and smooth.

The down side is that this was a lot of work and I did have to spend a few hundred to get a programmer to build this module, so for now I am asking for donations to help our clan recover some of the cost of building it.

We tried to keep it as universal as possible

To see in action you can go to:

<http://moh.xoaclan.com/modules/members/>

To get a copy you can send a donation to:

Paypal@xoaclan.com

Be sure to put in the comments XOOPS Roster Module. Since I live in California USA you should expect the module emailed to you within minutes to a few hours between the hours of 6am to 10pm PST

List of features

Edit the titles

Create titles

Delete titles

Set weights for how you want the titles to list

Edit the Members

Approve new members

Delete new / old members

Link up the members picture to show on profile page

Email link on every profile

Automaticly insert new apps into members (no more copy and paste)
and so much more.

This module is a simple yet effective roster, if you think team is too complex you might want to try this. Simple, and to the point here.

Thanks for all your support on this I know if you liked the OFX Roster you will love this Module for your XOOPS site.
