WebMailFX 1.0RC1 is out! - Modules

NEWS_PDF_AUTHOR: flyingtux

NEWS_PDF_DATE: 2004/11/3 22:28:14

We finally did it!
WebMailFX 1.0RC1 is here, with tons of new features. Don't wait any more! Download it, use it, stress it, enjoy it and... give us feedback!!!!!

New features in this version:
-Group permissions which allow you to control several features.
-Security features such as "lock to xoops" which will prevent spammers and abuse on your server.
-User created webmail. Now you can list, erase and change mail quotas for your user@myserver.com accounts.
-New smtp class. This new class works with the vast majority of mail servers. It allows for multiple authentication methods.
-Attachments are now sent directly from users computer. No more worring about temporary files on your server.
-Integrated Help. Now you can access a help file from the admin menu with a detailed explanation of what each option does.

More infos on the official project pages:
