xhld is the most powerful and the latest headline module.
this module can recieve various feeds by RSS 0.9x/1.0/2.0 and ATOM 0.3

You can see the demonstration of xhld

Although xhld is based on XoopsHeadline as standard module, xhld is more excellent in
following points.

- powerful (ATOM ready!)
- fast (x100 over)
- secure (you can turn allow_url_fopen off)
- feature rich (title&link extraction, Duplicatable V2.1, proxy etc.)

Just try it!
