

Xoops Tutorials - XOOPS

NEWS_PDF_AUTHOR: jdseymour

NEWS_PDF_DATE: 2005/1/14 7:10:49

I have just started a new section to this site. It is a section of **Xoops Tutorials**.

What it is exactly is a series of flash tutorials that explain how to complete different operations within **Xoops** and general site management functions. Sometimes seeing is easier to understand than reading.

The tutorials are located in the [Xoops Tutorials](#) section of the site.

So far I have two active sections within the **Xoops Tutorial** section. The first is **Module Deployment** with the following tutorials included:

1. *Module Unzip Tutorial*
2. *Module Upload Tutorial*
3. *Module Install Tutorial*
4. *Module Uninstall Tutorial*

Since most content in **Xoops** is supplied through modules, this series explains the basic steps to deploy and remove modules to the Xoops system.

The second series is **Site Trouble Resolution** which has the following topics:

1. *PHP Debug Tutorial*
2. *MySQL Debug Tutorial*
3. *Smarty Template Debug Tutorial*

There are times when our sites have problems (blank pages, missing or wrong content, or not expected behavior), these tutorials show how to turn on the built in debug features, what the output looks like, and basic information about what can be done with the output.

I have just started a third section on theme deployment. So far just on entry'

1. *Theme Unzip Tutorial*

I will be adding more regularly. I would like to know if these are helpful to you. If they are, or are not, please comment either way. Comments are open to everyone, the forum requires standard, free site registration.

All tutorials are available for download in two formats, flash movies, or PDF files.

The tutorials are available at the following:

[WarPigw2 Document Downloads](#)

And

[Docs.xoops.org Community Documents](#)

As always at WarPigw2.com, *Enjoy the information, give feedback, and have fun.*
