

XOOP-Stats v0.45 for XOOPS 2 - Modules

NEWS_PDF_AUTHOR: seventhseal

NEWS_PDF_DATE: 2005/1/15 20:46:24

We are proud to announce the General Release of another great [XOOPS@IBDeeming!](#) mod for XOOPS 2 - XOOP-Stats v0.45 for XOOPS 2.0.7+.

XOOP-Stats continues to evolve and become a better, more enhanced offering for XOOPS 2 administrators.

There are a number of great new enhancements to make this an important and integral part of your XOOPS site!

This version has the following features (in no particular order!):

- Italian by Juri Montico - no site , yet!
- Fixed issues with IIS and \$_SERVER calls
- Added reverse lookup information for IP addresses (ADMIN functions)
- Added xWhois functions for Domain Names (ADMIN functions)
- Added query string and fragment string on refer table (ADMIN functions)
- Added stats for
 - mydownloads
 - WF-Downloads
 - AMS
- A big thank you to user rniidam for the Dutch language files!
- Added SQL ordering to the referers table (ADMIN functions)
- Added sorting for IP (ADMIN functions)
- Full screen width and color depth is tracked (ADMIN functions)
- Added intelligence for
 - DeepNet Browser (seeing a lot more of these)
 - Avant Browser - better than IE alternative
 - DigExt Offline crawler - these can hammer a site! Watch out!
 - Waypath - blog seeker
 - SharpReader - RSS Feed collector
 - Turnitinbot - although always collected - be aware that this is out there. It's a plagiarism searcher that reports back. Although their site <http://www.turnitin.com/robot/crawlerinfo.html> states it's nice and pays attention to robots.txt, my logs beg to differ! This used to be Slysearch.
- MediaPartners - Google - No longer identifies as a bot, it's for AdSense

Make sure you check the Readme.html for the latest instructions on upgrades, fresh installs, etc. There are bigger plans for the next release! Get your copy [HERE!](#)

SUPPORT

Go to XOOPS@IBDeeming! and check the forums. You can also contact us at the site for more support! Thanks for using this mod!
