xWhois V1.0 - minor template problem - Modules

NEWS_PDF_AUTHOR: seventhseal

NEWS_PDF_DATE: 2005/1/21 7:19:14

We found a minor problem with the block templates included with xWhois V1.0. Basically, the form created would not pass the correct variable names to the processing component. We've corrected it in the package. You can get it **HERE!**

OR...

You can just replace both of the block templates with each of the following code:

b_xwhois.html

Domain Name Search: www.

.com
.net
.org
.info
.biz
.us
.ws
.bz
.nu
.ca
.cc
.name
.tv

and for bc_xwhois.html

www.

.com
.net
.org
.info
.biz
.us
.ws
.bz
.nu
.ca
.cc
.name
.tv

No one had posted any issues, so the blocks may not be getting used too much. The module and underlying code works perfectly. So, no version change here. Thanks!
