

Publish your news in the Mozilla and netscape Sidebar - Modules

NEWS_PDF_AUTHOR: hervet

NEWS_PDF_DATE: 2005/1/24 20:35:40

If you want, you can give the possibility to your users to read your website's news directly from their Mozilla/Netscape sidebar. To do it, create a custom html block in the blocks manager, name it as you want and copy/paste the following content inside it (you will have to replace the website's name and the url or your website). This example is available for xoops.org :

```
function addabar()
{ if ((typeof window.sidebar == 'object') &&
    (typeof window.sidebar.addPanel == 'function'))
  { window.sidebar.addPanel ('Xoops News','https://xoops.org/pda.php',''); } }
```

[Click here to add the Xoops News](#) to your browser's *sidebar*

I did not made this script myself, I just had the idea to use it for Xoops. All the credits are for the [creator of this article](#)

PS : in the final link, remove the space between the word *java* and *script*
