

Security hole in Incontent 3.0 - Modules

NEWS_PDF_AUTHOR: philou

NEWS_PDF_DATE: 2005/2/1 11:24:04

A vulnerability was reported in the XOOPS third party Incontent module. A remote user can view the content of PHP files

The module does not properly validate user-supplied input in the 'url' parameter

The author web site is down also please don't use this module before correcting the hole.
