

Kansai community web site using Xoops - YAXS

NEWS\_PDF\_AUTHOR: noisia

NEWS\_PDF\_DATE: 2005/3/6 12:31:10

We have changed the web site of the Kansai Time Out from static HTML to xoops.

<http://www.kto.co.jp>

The site is using the following modules:

**stories 0.9** for front page small news

**wf-channel 1.07** for about this site

**booklist 0.9** for information about places to go

**tinyd 2.07** for information about the company

**smart faq 1.04** for questions about life and culture in Kansai

**links 1.1** for web links

**smartsection 0.93** for uploading stories about Japan by the community

**piCal 0.6** for events in Kansai

**CatAds 1.23** for classifieds

**xhld 2.5** for RSS headlines of news about Japan

**MS-Weather 1.4** for the Weather in Kansai

**MyPage 1.1** for inserting some old pages into a iframe

**Xoops Protector 2.2** you never know who wants to screw you...

**koivi\_editor class v1.0.4.1** for WYSIWYG editing in smartsection (later in other modules as well)

**PhPAdsNew 13.08** for Banner ad management (This is really a module with a steep learning curve though)

I would like to thank all the xoopers for the great help and the great modules that have been

developed.

Please give me any comments about the site and recommendations or suggestions about the usage of the modules.
