

WebMailFX 1.0RC2b is out! - Modules

NEWS_PDF_AUTHOR: flyingtux

NEWS_PDF_DATE: 2005/3/16 8:34:24

The WebMailFX Team is proud to announce the release of version RC2b of WebMailFX. Lot of changes have been made, such as:

- Fixed CPanel autocreation in inbox.php.
- Fixed several bugs in settings.php.
- Added patch to Function SendMail in /class/email_message.php. This allows to set correctly the Return Path when PHP is set in safe mode on the server.
- Added more lang constants.
- Fixed error in contactbook.
- Added another statistic.
- Made small change to cpanel statistic
- Fixed "Reply" and "Forward" functions in readmail.php: original text is now shown correctly.
- Code optimization in inbox.php.
- Removed libmail.php which is no more used.
- Added Turkish Translation.

We hope you will all enjoy this new version and, as usual, we encourage everyone to give us feedback and support.
