The WF-Project is pleased to announce the release of WF-Links 1.0.1 RC.

WF-Links is a module to create a link section for Xoops that offers more features than the original mylinks module which is part of the older Xoops distributions.

You can create a link section with multiple categories and sub-categories.

Here is a short selection of features offered:

- Create multiple categories and subcategories for your links
- Submission permissions per (sub-)category
- Moderation permissions per (sub-)Category
- Choose to validate link submissions first or have them automatically accepted
- Add screenshots to your links
- Add a description to your links
- Add a maturity rating for your links
- Allow user ratings and comments for your links
- Define publishing and expiration times for every link (optional)
