

Simple Accounts (SACC) V0.1 Alpha/Review released - Modules

NEWS_PDF_AUTHOR: chippyash

NEWS_PDF_DATE: 2005/4/6 15:18:28

Many business systems (and other non-business ones) are required to account for financial value in some manner. This module is aimed at providing double entry book-keeping facilities for Xoops business systems developers. Although it can be used by itself, that is not it's real aim.

SACC provides the following functionality:

- * Multi organisation accounting (accounts for >1 organisation can be kept in the same system, thus once the module is installed, many applications can use it.)
- * Basic on screen journal entry of accounts.
- * Hierarchical accounts
- * A program API based on xoopsObject that can easily extended for additional application functionality

This first release is a useable module and allows data entry by users and an API for developers. Subsequent releases will add additional features but SACC will never be a replacement for GNUCash 😊

The module can be downloaded at dev.xoops.org
