The last time I posted here I had just started a tutorial section on my site. The usage of the tutorials have been great. And a big thanks to the Xoops community for that.

Since the last time I have added two new Xoops Tutorials:

The [Xoops Installation Tutorial](#) and under a new category [The Xoops Administration Tutorials](#) I have added [Exploring Xoops General Settings](#).

But, I think the big news is another new category I have started: [Newbb 2 Tutorials](#) which contains four new flash tutorials on the installation and configuration of Newbb 2.

I chose Newbb 2 because I see a lot of questions on the Xoops forums on this topic, and it is not a simple upgrade for a new user. Also the configuration can be pretty tedious for someone who is starting out with newbb 2. I will be adding other modules in the future.

The tutorials cover preparing for a newbb upgrade or installation. Upgrading from Newbb 1 to Newbb 2. Category creation and forum creation, including settings and permissions for both.

All these tutorials are available for viewing on my site in the [WarPigw2 Tutorials section](#)

Also they are available for download at [WarPigw2 Downloads](#) and in the [Community Documents Section](#) of the Xoops Documentation Site.

And lastly, I have just updated my theme. The right and left blocks can be hidden to maximize screen real estate for tutorial viewing.

I hope these tutorials are helpful to you. If you have any questions or comments please post in the [Xoops Tutorials Forum](#) it is open to anonymous users with moderation. I will approve it quickly though. Otherwise join the site and post freely.

Thanks again. Enjoy the information, give feedback, and have fun. 😊
