I have just completed a major upgrade to the [MyHeadlines](#) code base, and on a whim

I thought the Xoops camp should get their own release. A couple Xoops regulars [discussed my code](#) a while back, and contacted me about it. Today I invite the Xoops community to enjoy this module, along with the rest of the PHP CMS's. Check out the [FAQ](#) for more info on what MyHeadlines is and why you'll love it so much...
