

Formulaire V3 - Modules

NEWS_PDF_AUTHOR: philou

NEWS_PDF_DATE: 2005/5/11 15:46:11

Hello everybody,

After a lot of time with the 2.8.x version, it was necessary to make an update and correct some bugs.

Some fonctionnalités were necessary too.

So, i worked with Fabien (a student friend) during few weeks. I'm happy today to present our work.

[Download the Formulaire V3](#)

Be careful, due of many changes in this version, it is incompatible with previous versions !

You will find a file 'install.txt' in the formulaire folder, read it before installing.

A complete help is available from module's admin (after install)... read it !!!

Here is an extract from changelog.txt (You could find it in the formulaire folder) :

This version perfectly works with register_globals at OFF

Examples of fonctionnalités added :

- a link permits to accede directly to a form from the admin pages
- addition of help on the menu pictures
- new interface for admin nemnu
- arrows to change the element position
- possibility to activate or desactivate the forms directly form the form's admin page
- in the mail, a new link to the user profile has been created
- url of return after mail sending
- help text for forms
- text for the submit button
- elements to send (IP, web navigator, submit by)
- text encoding for mails (ISO-8859-1,ISO-8859-15,UTF-8,cp866,cp1251,cp1252,KOI8-R,BIG5,GB2312,BIG5-HKSCS,Shift_JIS,EUC-JP)
- in the preferences, addition of a default value to the join files weight (size in KByte)
- possibility to order the sendings by date and user in the consult page
- possibility to save or not the sendings for each form
- in the user block, a link permits to reach the admin part (if the user is admin)
- a new page gives information about the server. on the server info page, you can put or remove

the PHP debug mode

- the number of sendings for each form is now displayed in the consult page
- the arrows permits to move the menu elements, the boxes to put directly the order have been put (following the request of Alain01)
- for upload element, there are 2 new types : rar and zip
- in the user part, the max weight for the joined files is now displayed
- separator element, the element can now be bold
