For those of you who enjoyed Kubrick but found it didn't quite suite your needs, you will be happy to know there are two more variations available. One variation puts the menu on the left, and the other variation makes Kubrick variable- or flexible-width. That also means both the right and left columns are available if you should choose to enable them.

They can be downloaded from [my site](#)

Questions and/or support should also be dealt with at the [forums](#) on my site where they will be answered quickest (because I find them faster there! 😊)
