

LOTR Tribute Theme v2 - Themes

NEWS_PDF_AUTHOR: JMorris

NEWS_PDF_DATE: 2005/7/7 5:24:05

There is the revised version of the Lord of the Rings Tribute Theme at [MyWebResource](#). This is a much more refined version of my original work. I've fixed a LOT of bugs that I've discovered since the original release. If you liked the first LOTR theme, you're going to love v2! You can view a live version of the theme on MyWebResource.com by selecting lotr from the themes block.

[Download LOTR v2 from MyWebResource](#)

NOTE: I cannot guarantee that this theme will work with all modules. Some module developers insist on coding presentation elements in their templates instead of calling the default XOOPS CSS classes. You may have to clone and edit your templates to get everything to look just right.

Enjoy!

Changelog:

- Remove gradient background image from th tag
- Set the background image as fixed and non-repeating
- Fixed several CSS issues that made content hard to read
- Added an animated .gif that incorporates all three headers
- Added to the bottom of the center column
- Fixed the html in theme.html that referenced the default theme
