- Mail templates

Mail texts sent to users, such as registration confirmation mail, lostpassword mail, send to friend mail can now be customized easily by modifying mail templates by your text editor.

- New Polls module

Polls module has been rewritten completely (except for the comments section). Admins can create polls with multiple selections, expiration time, and custom bar colors. Notification mail will be sent to the poll author when the poll has expired.

Though this module is currently only for site admins, we have plans to extend its feature so that other modules like news, forums can use it as a plug-in.

As I have mentioned in the previous news, RC3 will be initially released as clean install version only. Upgrade script will be provided some more time after the initial release.
