eXtCal is an event/calendar module developed exclusively for XOOPS, it is thus integrated perfectly there.

It integrates a fine management of the right user allowing thus a great flexibility in are use. You can view it in live and find support on my web site : Zoullou.net.

This is the second Release Candidate version, don't use on production site. Please report any bug you find by the [Bugs Tracker](#).

Thanks to [MarcoFr](#) for his help.
