

eXtCal 2.0 Final - Modules

NEWS_PDF_AUTHOR: zoullou

NEWS_PDF_DATE: 2005/9/1 13:40:00

After 3 Release Candidate and a few fixed bugs, [eXtCal](#) 2.0 Final is out.

[eXtCal](#) is an event/calendar module developed exclusively for XOOPS, it is thus integrated perfectly there for programming and design.

It integrates a fine management of the group permission for category and allowing thus a great flexibility in are use. They are 4 differents view (Yearly and daily with list view, monthly with calendar view and one view for event detail) and 5 blocks (upcoming event, new event, random event, spotlight event and a minicalendar).

Two releases of this module are available : one for XOOPS 2.0.13.1 and one other for XOOPS 2.2. This module is designed for XOOPS 2.2 and will be fully operational with this version.

XOOPS 2.2 users must upgrade their version to XOOPS 2.2.2 and replace kernel/object.php file by this one : [object.php_for_XOOPS-2.2.2.zip](#) to correct a "Remove Me" bug.

Support for this module is available on [Zoullou.net](#).

If you find bugs or want new features, please use [Trackers](#) and give your XOOPS version for bugs 😊.

Thanks to [MarcoFr](#) for his help.

If you have an old eXtCal version (1.0 or 2.0 beta/RC) uninstall it and delete extcal folder before install eXtCal 2.0 Final. If you want recover eXtCal 1.0 events [PM me](#).

[eXtCal 2.0 for XOOPS 2.2.x](#)

[eXtCal 2.0 for XOOPS 2.0.13.1](#)

I hope you will like this module

Cheers
