

QA_Checking Tool for Modules 2.0RC2 is out ! - XOOPS

NEWS_PDF_AUTHOR: Marco

NEWS_PDF_DATE: 2005/9/4 21:30:00

A new version of our QA tool for modules is up !

QA team is proud to release version 2.0 RC2 of its QA_Checking Tool for Modules.

What it is for ?

The goal of this tool is to provide :

- module's developers a tool that will help them with checking if their modules are using all xoops's core powerfull features, which documentation, security features, SEO features, etc. their module should have.
- module's testers some ideas about how to validate a module before posting it to community. Could be usefull too for xoops's local support teams or everyone who wants to help devs improving their modules.

What is still to do ?

- Find a full xhtml compliant theme
- Perhaps add some tests for utf8 compatibility ? If Chinese or russian teams could give us some feedbacks on that, would be appreciated !
- Define for SQL query/time standard level
- define which item is mandatory ("must have") or recommended ("should have")
- Set Certification Levels
- Add all items of this tool in a dedicated xoops testing module (example : formulaire)

How to Download this tool ?

http://dev.xoops.org/modules/xfmod/project/showfiles.php?group_id=1187&release_id=720&dl=1837

Note to translators

Feel free to translate this tool, as it should be usefull for your community.

Finally, **This QA Checklist Tool is made for you ! Let's bring together xoops @ its best for a professional usage.**

It's still an RC version, so feel free to provide feedbacks/enhancements! We still need some inputs as listed before to release soon a final version.

Thanks

Special thanks to thank JasonMR, Mithrandir, Hervet, jensclas, jorgebarrero, rowdie, kaotik, thecat, Philou, Alain01 for their help, advices and support.

Cheers !
marco

Changelog RC1-->RC2 2005/09/03

Add files disclosing physical server paths into Security Section

Add utf 8 Compatibility : waiting for some feedback about !

Add confirmation/redirection messages into

Add Dev/Run Check Status

Some wording

Add sheet protection (no passwd)

Modification in SQL Query : add no query in xoops_version file

Added absolute patch in SEO

Add one ligne in Design/Documentation

Change name of tool (was before Checklist4ModDevs) after kaotik gave me some inputs (thanks guy)

Please feel free to give us feedback
