

New Xoops XK_Editor version - Modules

NEWS_PDF_AUTHOR: samuels

NEWS_PDF_DATE: 2005/10/6 10:20:00

I've released a new version of the editor. Update packages for xoops 2.0.x and 2.2.x available here:

http://dev.xoops.org/modules/xfmod/project/showfiles.php?group_id=1038

1.053 beta 2:

- Security fix according to Marijuana's report: /class/xoopseditor/koivi/dialogs.php
- Removed \$_GET['url']
- Added check on \$_GET['skin']
- Correction on including Xoops mainfile.php for dialogs.php;
- Added charset to dialogs.php output page;
- Removed unnecessary functions for dialogs.php: getMainfile, getLanguage

- Added new function "Insert paragraph"
- Added buttons to change editor height on the fly.
- Now you can customize the editor area with css, "skins/SKIN_NAME/editor.css"
- Added Flash support under Gecko browsers.
- Made some improvements on CSS files.
- Improved some routines.
- Removed some redundant code.(lighter and quickie!)
- dialogs.php changed. Now all dialogs are in separated files.
- editor.js is now object oriented.
- Toggle borders rewritten. Now visual aid affects divs and forms.(thx frakblack for the idea)
- "Maximize editor" rewritten. Now it takes all available space and auto-fits when the browser window is resized.
- Solved bug, editor was losing text direction when changes from wysiwyg to html mode.
- Solved bug under iexplore when user edits a full html page. (Some events like context menu stopped)
- Solved bug under gecko taking body tag attributes.
- Added a workaround for iexplore (it ignored some tag attributes).
- Added a workaround for iexplore when submit the data and a metatag has the same name as the textarea.
- Now iexplore and gecko don't delete scripts.
- Now linebreaks are respected (improve come with javascript funcs). Make sure you disable Xoops convert linebreaks feature.
