I've always been envious of mambo's and joomla's great admin menu's. So I decided to create something similar for Xoops.

This gives you a nice graphic interface with "pretty" icons for your admin menus.

There is 2 parts to Vitamin C:

-theme; which gives you part of the functionality

-module; which provides the other part.

I couldn't get the whole thing integrated into a theme, that's why there are 2 components.

Keep in mind this is a first version, as such it will evolve and change depending on user input.

You can download it from my site at:
