Here at UpYou.it, italian site dedicated to technology and computers, we have upgraded the core to Xoops 2.2.3a from Xoops 2.0.13.2.

Also we have changed graphic theme and general layout of many modules like News and CBB 2.30. For the articles we are using an higly modified version of the original Sections.

We have also removed mydownloads and added RM+ Download Plus using and update script (well, something didn't go so well and we had to do some MySQL 😁).

Please visit the site and leave a comment here 😁

Thx!

Stefano
