

Edmunds Enterprises Moves To Xoops With 2 New Modules - YAXS

NEWS_PDF_AUTHOR: Tuxster

NEWS_PDF_DATE: 2005/12/5 23:45:46

Edmunds Enterprises is proud to announce the successful migration to Xoops for their Linux Software and Hosting site, [Edmunds Enterprises of America, Inc.](#) This migration required the creation of 2 new custom Xoops modules:

- a full featured shopping cart module
- a complete Amazon eCommerce API implementation

These modules involved more than just wrapping the existing code with Xoops. Each was completely redesigned to be truly Xoops specific and leverage the great capabilities available to Xoops modules. We were able to increase functionality while simultaneously simplifying the code base by using such Xoops features as the built-in image manager, Smarty templates, comments, notifications, searching, and the many great Xoops object oriented classes that are available to module developers.

Congratulations to the Xoops Core developers for creating a very nice development environment with both form and function. Nice job guys! We can't wait to see the roadmap items come to life in the months ahead.

We welcome you to visit us today to see these new modules in action:
