

Dynamic Meta Tag generation for Xoops - Modules

NEWS\_PDF\_AUTHOR: chippyash

NEWS\_PDF\_DATE: 2006/3/9 9:18:03

XBS MetaTags V1 RC1.

Generate meta keywords, titles and descriptions specific to each page of your Xoops site. Keywords can be from a static list or generated by three methods on the fly.

This module is intended for Xoops 2.0.13. Use on V2.2 is subject to known bugs, but it can be used.

Read the available documentation. Also read the `metatags_info.php` file to see how you can adapt your future modules for inclusion under the metatags scheme. You will need to make a one line hack of `footer.php` to make this work, but everything else is controlled from the administration panel.

Download at [Xoops Development](#)

Support at <http://xoobs.net>

See it working at <http://homelineco.com>

Thanks to Hervé Thouzard (<http://www.herve-thouzard.com>) for his [XFG hack of Xoops](#). It formed the basis for this work.
