XBS MetaTags V1 RC4 released - Modules

NEWS_PDF_AUTHOR: chippyash

NEWS_PDF_DATE: 2006/3/16 13:37:15

Auto Metatag keyword generation for Xoops 2.0.13.2 and 2.2.4.

This is likely to be the final release candidate that adds new functionality.

Added:
Tracking - Stores all words generated by page for later use in Black and White lists.
Blacklist - Create a list of words that are never included in keywords.
Whitelist - Create words that are always include in keywords

Auto Keyword generation now 'shuffles' the displayed keywords so that they are never in the same order in the keywords metatag. This helps to maintain changing content on a page.
