

A security patch for XFSections module is available - Modules

NEWS\_PDF\_AUTHOR: ohwada

NEWS\_PDF\_DATE: 2006/3/20 8:50:11

## Important

The security hole was found in XFSection module.

V1.11 was released.

I recommend you to upgrade.

[Here is XFsection 1.11](#)

In this security hole, the cause is that GET variable are unfolding automatically.

I corrected all codes similar to this.

```
foreach ($HTTP_GET_VARS as $k => $v)
{  ${$k} = $v; }
```

\* The contents of change

There are bug fix altogether.

No additional functional.

1?Security

delete code "foreach (\$HTTP\_GET\_VARS as \$k => \$v)"

2?corresponding to PHP5

(1) Fatal error: Cannot re-assign \$this in include/functions.php

(2) Fatal error: Cannot redeclare class wfsfiles

(3) register\_long\_arrays = Off

replae \$HTTP\_\*\_VARS

3?page number is displayed too many

\* changed files

Since I changed many files, it may be degraded.
