

Myiframe version 1.4 BETA - Modules

NEWS\_PDF\_AUTHOR: hervet

NEWS\_PDF\_DATE: 2006/4/7 17:09:26

Hello,

It was a long time since I did not changed anything in the Xoops Myiframe module.  
A new version, beta 1.4 brings some new functionalities.

Before to list those new functionalities, I want to recall you that **it is not recommended to use this version on a production website as long as the module is in beta stage**

Here is the list of modifications :

- All the code was rewritten (to use XoopsObject for example)
- Two new options
  - 1/ List iframes in the Xoops menu
  - 2/ Display the list of iframes in the module's index page
- I have added a block (to contain iframes)
- You can use "on the fly" blocks (like this you can have as many blocks as you want). See the file called readme.txt in the module's archive for an explanation
- All the table's fields were changed because of some problems with Mysql 5.  
Normally, you just have to go in the module's administration to upgrade it.
- Some new constants in the translations

Module is available in English, French and Spanish, you can [download it here](#). It should run with Xoops 2.0 & Xoops 2.2

[You can post bugs reports and suggestions here](#)

Bye,  
Hervé
