NEWS_PDF_DATE: 2006/4/8 10:58:50

multiMenu, final version is now available.

This is a menu manager module which allows creating up to 8+2 custom, compatible and independently configurable menus (including dynamic and static links - standard menu, list, select boxes, context, dynamic, context and many more menus).

The huge change on this version concerns the templates management (no database change). To upgrade from 1.7 to 1.8, replace old files with new version, and update your module. For webmasters using “custom templates” you will need to update your custom templates manually through the template manager system.

The 1.8 is now compatible both with Xoops 2.0.x and 2.2.x version.

You can have a samples of this module on [Arma sa](#).

- > Horizontal dynamic menu: header horizontal menu.
- > Vertical dynamic menu: Top left “Département” block.
- > Picture menu: Top center-center blocks (Toiture, bois de terrasse, Aménagements extérieurs) and Top right block (Aménagement intérieurs).
- > Scrolling picture: bottom right block (Nos Marques).
- > Context menu: right-click on page) – a clone of the header menu.

Along with this brand new version, we propose two version of the module:

>> [multiMenu 1.8 – 8 menus](#) [multiMenu 1.8 – 16 menus](#)
