

Cafepress Shop v1.03 Released - Modules

NEWS_PDF_AUTHOR: bmichel

NEWS_PDF_DATE: 2006/4/23 17:53:37

Cafepress Shop is a small module which allows a holder of a Cafepress.com Basic Store to display his products as part of his Xoops web site. The store will actually be embedded to the Xoops web interface as if the store is directly hosted on the web site. The module also includes a block which displays a random product from the store with the possibility to show or hide the price and description of the product.

The older version of Cafepress Shop doesn't work correctly any more due to changes on the Cafepress.com web site. So here is Cafepress Shop v1.03 with the regular features plus an update checker and fail safe mode option. Can also be used by Cafepress Premium Shop owners.

Change Log

=====

- Fixed several bugs resulting from changes on the Cafepress.com web site
- Added a Fail Safe Mode option, which enables or disables the item page
- Added a check update feature. When a new version is release, you'll receive a message in the administration menu
