

[MODULE] MultiMenu 1.8.1 version available - Modules

NEWS_PDF_AUTHOR: solo71

NEWS_PDF_DATE: 2006/4/25 8:45:08

There are no big changes since version 1.8 finale: some bug corrections and functionalities updates.

Main changes

Vertical CSS Dropdown is now usable in the right-hand side column.

- Modification of 2 templates: Vertical Dropdown 2 and Treemenu
 - > if Javascript is deactivated, an alternate menu (which is not using JS) is loaded.
 - Modification of 6 templates using the Smarty function "maths equation".
- To prevent the displaying of an error message in debug php mode.
- Modification of the standard menu template: which is deformed when there were no URL on primary links.
 - For 16 menus version: a variable was modified in the modinfo.php file.
 - > Blocks names were not correctly generated: previously limited to 8
 - New Smarty variable enables you to apply styles to menus' templates, according to the theme used.

See the module documentation for more details.

- New menu: Treemenu

See the menu options table for more info.

- Possibility to mask name of a block and to let appear his contents only.

See documentation for more details.

- In the menus options table : links added on some menus, allowing to display some advices regarding use of these menus.

Version 1.8.1 is still compatible both with the versions 2.0.x and 2.2.x of Xoops.

2 available versions

And as always 2 versions proposed:
