

Userpage, definitive version - Modules

NEWS\_PDF\_AUTHOR: hervet

NEWS\_PDF\_DATE: 2006/4/28 17:06:08

Hello,

The Xoops module called userpage has just been labelled "definitive version 1"  
This new version is a correction of the previous beta version and it only contains bugs corrections.

So you can use it on a production website.

For memory, with userpage, your registred users can create their own page (for example their biography).

Once they have created their page, it can be viewed by other users (and it can be commented too)

Here is a quick reminder of its features :

- Users can create their own page
- Users can see someone else page and a list of all the pages
- You can activate RSS feeds to list the recent pages
- For each user's page, you have a printable and a Pdf version.
- The module gives you 3 blocks : Last pages, Top viewed pages, Random pages
- The 3 blocks provide you an "on the fly" method so that you can use the blocks as many times as you want
- Users pages can be commented
- In the module's options, you can select if you want to activate Html, RSS feeds (and the text's length), you can also select the date's format and you can select to use kiovi.

And here is the changelog :

- The permissions are (for this moment) fully delegated to Xoops
- A bug in the comments were corrected

This version does not bring any new feature.

However, the requested features (for example more than one page per user) will be available in the next releases.

Stay tuned 😊

[You can download this new Xoops module on my personal website.](#)

Once downloaded and copied on your website, install it as any other Xoops module.

[Use this forum to post your bugs reports and suggestions](#)

*Redistribution of this module on mirror sites like Sourceforge is (still) not permitted !*

The module should runs with Xoops 2.0 and Xoops 2.2

**Thank you very much to all the translators who have translated the module in height languages in a few days !**

You can use it in Arabic, English, French, German, Nederlands, Portuguesebr, Romanian and Spanish

Bye,  
Hervé
