

SourceForge CVS Changes - Developer News

NEWS_PDF_AUTHOR: gstarrett

NEWS_PDF_DATE: 2006/5/14 4:09:00

Attention users and developers who access the XOOPS source code through SourceForge's CVS services:

SourceForge has just completed rolling out a new CVS architecture, which affects the way we access the CVS servers. The hostname for CVS access has changed to "xoops.cvs.sourceforge.net".

(check details ...)

The hostname for CVS access has changed from "cvs.sourceforge.net" or "cvs.sf.net" to "xoops.cvs.sourceforge.net". The new CVSROOT to use when accessing XOOPS CVS anonymously is:
Quote:

:pserver:anonymous@xoops.cvs.sourceforge.net:/cvsroot/xoops

According to SourceForge, the changes will offer greater performance and stability and will eliminate several single points of failure.

Note that access to the XOOPS core is through Subversion, which isn't part of this change. See the XOOPS SourceForge project Subversion page for more information on subversion:
http://sourceforge.net/svn/?group_id=41586

See the XOOPS SourceForge CVS page for more information on using CVS with XOOPS.
http://sourceforge.net/cvs/?group_id=41586

Developers, see the dev.xoops.org internal discussion thread for additional information:
http://dev.xoops.org/modules/newbb/viewtopic.php?viewmode=flat&topic_id=1158&forum=27
